Serialized shape distances between the hobbit ("L.Bua"), Australasian H. sapiens, and the H. habilis fossil OH24.

Top right half-matrix shows the calibrated distances after linkage clustering (Nearest Neighbour) and seriation. Bottom left half-matrix shows the same distances after minimal transposition that produces a perfect seriation, i.e. where every distance closer to the diagonal is less than or equal to every distance further from the diagonal, along either a row or a column.

Coefficient of determination between the values in these two half matrices is 84.5%

Explanation of acronyms: OH24, Liang Bua 1 (L.Bua), Liang Lemdubu (Lemdubu), Leang Buidane (L.Buid), Roti female, Tasmanian females and males (Tasf and Tasm), South Maluku males (Maluku), Lesser Sunda males (Sundas), New Britain males (NewBrit), Mysore-Rubi males (Mysore), Murray Valley females and males (Murff and MurrM), Purari Delta males (Purari), Northern Territory females and males (NTF & NTM), and New Caledonia (NewCal).
